

NEGASO KENA

Addis Ababa, Ethiopia | Phone: 0917843883 | Email: kennaakoo143@gmail.com
GitHub: github.com/Negi-kena | LinkedIn: linkedin.com/in/negi-kena17

PROFESSIONAL SUMMARY

Highly motivated and structurally minded Full-Stack and Automation Developer with a unique capability to architect software systems by pairing core JavaScript concepts with aggressive, orchestral AI prompt engineering. Successfully transitions advanced infrastructure management and cloud platform prototyping into production-grade engineering solutions. Proven expertise in deploying self-hosted automation engines via Docker on Linux environments, routing complex multi-stage webhook/API architectures, and building targeted web applications during competitive cloud scholarship challenges. An expert at guiding AI tools with deep intentionality to generate hyper-accurate outputs, prototype interfaces rapidly, and design defensive application workflows. Eager to bring technical agility, infrastructure awareness, and a fierce growth mindset to the engineering team at Sweaven Solutions PLC.

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), HTML5, CSS3, SQL
Frameworks & Runtimes:	Node.js, Express.js, Next.js (Actively Learning / Concept Fundamentals)
DevOps & Infrastructure:	Docker, Ubuntu Linux, Self-Hosting, Server Administration
Automation & Integration:	n8n (Self-Hosted), RESTful Webhooks, API Architecture, Zapier, HubSpot CRM Configuration
Methodology & AI:	AWS PartyRock Prototyping, Orchestral AI Generation, Prompt Engineering for Code Accuracy
Layout & Styling:	CSS Grid, Flexbox, Responsive Web Design
Developer Tools:	Git, GitHub, VS Code, Postman

PROFESSIONAL EXPERIENCE

CRM Automation Specialist (Contract)

Remote / US-Based Company

- Architected and managed advanced CRM workspace configurations and data flow pipelines using HubSpot CRM to support international business operations.
- Designed and optimized segmented lead workflows and tracking properties to ensure data alignment across sales funnels.
- Wrote custom data filtering logic and field mapping schemas to ensure zero-loss synchronization between inbound channels and core customer databases.

SOFTWARE ENGINEERING & DEVOPS PROJECTS

AWS Cloud Challenge AI Prototypes (Ethio Scam Checker & DevPromptizer)

AWS PartyRock, Generative AI Foundations

- Built and deployed two distinct AI-driven application prototypes on AWS PartyRock as part of the practical application phase of the AWS AI/ML Practitioner track.
- **Ethio Scam Checker:** Conceptualized a localized digital safety utility allowing users to cross-reference and verify potential digital scams. Orchestrated AI models to rapidly generate responsive layout patterns.

- **DevPromptizer:** Engineered a developer productivity tool that refactors raw prompts into highly structured execution instructions. Currently mapping out the JavaScript/Node.js architecture to migrate this from a PartyRock prototype into a standalone web application.

Self-Hosted Workflow Infrastructure & API Routing

Docker, Ubuntu Linux, n8n, Webhooks, REST APIs

- Successfully provisioned and maintained a self-hosted instance of the n8n automation engine on an Ubuntu Linux server utilizing Docker containers.
- Engineered and executed complex, multi-stage data integration workflows by utilizing custom RESTful API calls and webhook payload triggers within n8n.
- Configured container networking, volumes, and environment variables to ensure high availability, security, and continuous workflow uptime.

JavaScript Core Functionality Apps (Open Source)

Vanilla JavaScript, DOM Manipulation, CSS3

- **Responsive To-Do Application:** Engineered a task-management interface focused on clean state preservation, dynamic DOM updating, and intuitive user flows.
- **Custom JavaScript Calculator:** Built an arithmetic engine from scratch to master execution logic, input validation patterns, and accurate float calculation handling.
- Maintained full codebase ownership on GitHub, utilizing Git for explicit version control and code clarity.

EDUCATION & CERTIFICATIONS

AWS AI/ML Practitioner Intensive

Udacity Scholarship / June 2026

Selected scholarship recipient completing an intensive cloud curriculum focused on foundational AI/ML patterns. Directly applied knowledge by building functional generative AI applications during the learning window.

Wabiskills Software Development Bootcamp

In Progress

Intensive training path focused on Full-Stack JavaScript development, Backend Architecture, and deployment standards.

Bachelor of Science in Sports Science

Mattu University / Graduated 2024

Developed strong frameworks for deep structural analysis, system planning, pedagogical methodologies, and team collaboration.
